

# WEEKLY FROST DEPTHS

## February 28, 2023

Several residents within the City of Green River are experiencing frozen water services. Frost levels are still deep, up to forty five inches in some areas of the City. In an attempt to reduce the potential of freezing, you may want to let a small stream of water run. The water stream should be roughly the diameter of a pencil or about 1/8". A small increase in billing to prevent freezing could result in saving the cost of thawing a frozen water line.

Intersection	Depth in Inches
Astle and Hoover	38
Andrews and Barnhart	43
Clark and Andrews	40
Clark and Barnhart	39
Jefferson and McKinley	41
South 6 <sup>th</sup> West and Blake	41
Sunset and Trona	42
